PROFESSIONAL SUMMARY

Motivated technology professional transitioning from customer service into Cloud, DevOps, and Machine Learning engineering, backed by extensive self-directed project work. Built an end-to-end Azure DevOps CI/CD pipeline with automated multi-stage deployments to Azure Container Registry and App Services, reducing mean-time-to-detect failed deployments to under 2 minutes. Designed and provisioned a high-availability, load-balanced Azure infrastructure using Infrastructure as Code, targeting 99.95% VM availability. Developed a two-stage deep learning pipeline for automated cattle disease detection, achieving 93% classification accuracy. Proficient in Java, JavaScript/Node.js, SQL, Power BI, and Machine Learning, with hands-on experience in Docker, Kubernetes, and CI/CD automation. Seeking DevOps Engineer, Cloud Engineer, or Machine Learning Engineer roles.

TECHNICAL SKILLS

- Programming Languages: Java, JavaScript (ES6+), Python, SQL
- Java Development: OOP & SOLID Design Principles, Exception Handling, JVM Memory Management & Garbage Collection, Maven, Gradle
- JavaScript & Backend: Node.js, Asynchronous Programming (Promises, Async/Await), RESTful APIs, JSON
- Cloud & DevOps: Microsoft Azure (DevOps, Container Registry, App Services, Load Balancer, Availability Sets, Entra ID/RBAC), AWS (S3, RDS), Docker, Kubernetes, CI/CD Pipeline Automation (Azure Pipelines YAML), Infrastructure as Code (PowerShell, Azure CLI)
- Data & Analytics: Power BI (Power Query, DAX, Data Modeling), SQL (Joins, CTEs, Query Optimization, Indexing)
- Machine Learning & Deep Learning: Supervised/Unsupervised Learning, Neural Networks (CNN/ANN), Feature Engineering, Model Tuning & Regularization, MLOps, PyTorch
- Customer Operations: CRM Systems, Compliance & Verification Protocols, Performance Metrics (AHT, CSAT), De-escalation & Conflict Resolution

PROFESSIONAL EXPERIENCE

Customer Service Executive **Nov 2024 - Nov 2025**

Teleperformance, Hyderabad, Telangana, India

- Resolved customer inquiries on first contact (FCR), addressing billing, technical, and account issues to eliminate repeat calls.
- De-escalated difficult customer situations using active listening and empathy, turning negative experiences into positive outcomes.
- Adhered to compliance and verification protocols, performing mandatory security checks to protect customer data.
- Accurately logged interactions in CRM systems, maintaining detailed records of conversations, resolutions, and pending actions.
- Managed call efficiency metrics, balancing quality service with speed to meet Average Handle Time (AHT) and Customer Satisfaction (CSAT) targets.

PROJECTS

Space Defender - Azure DevOps End-to-End CI/CD Pipeline **2026**

- Built a fully automated multi-stage build-and-release pipeline using Azure Pipelines YAML, triggering deployments instantly from code pushes with zero manual intervention.
- Packaged the HTML5/JavaScript application inside a lightweight Nginx Docker container with custom security headers to protect against web vulnerabilities.
- Integrated pipelines to automatically build, version, and push Docker images to Azure Container Registry (ACR), executing automated deployments to Azure App Services.
- Configured secure Azure DevOps service connections using Entra ID service principals to authenticate with Azure subscription resources.
- Configured automated post-deployment smoke tests, reducing mean-time-to-detect failed deployments to under 2 minutes.

High-Availability Load-Balanced Web Infrastructure on Azure **2026**

- Authored PowerShell and Azure CLI scripts to automate cloud provisioning, creating complete infrastructure (network, VMs, firewalls, load balancer) in under 6 minutes with a single command.
- Grouped virtual servers inside an Azure Availability Set to protect application uptime against host hardware failures, targeting 99.95% VM availability.
- Deployed an Azure Standard Load Balancer with TCP health probes to continuously monitor VM health and route traffic away from unhealthy servers.
- Configured strict Network Security Group (NSG) rules to isolate VMs from direct public internet access, routing traffic exclusively through the load balancer.
- Configured Azure RBAC via Entra ID, granting operations teams resource management rights scoped strictly to the resource group.

Lumpy Skin Disease Detection Platform **2023**

- Preprocessed a dataset of 5,000+ high-resolution cattle images, applying resizing, normalization, and data augmentation to address class imbalance.
- Designed a two-stage deep learning pipeline: a U-Net architecture for lesion segmentation and a pre-trained ResNet50 (transfer learning) for disease classification.
- Trained models using combined Binary Cross-Entropy/Dice Loss and Weighted Cross-Entropy Loss, achieving 93% classification accuracy.
- Containerized the PyTorch inference code into a Docker image and deployed it via a FastAPI/Flask API for real-time diagnostic results, with model checkpoints managed in AWS S3.

AWS 3-Tier Application Deployment - PaperLive Learning (Hands-on Training Project) **2025**

- Designed and deployed a scalable, production-style 3-tier architecture on AWS using VPC, EC2, Auto Scaling groups, Application Load Balancer (ALB), and Amazon RDS.
- Implemented event-driven workflows with AWS Lambda, SQS, and SNS to decouple application components and improve reliability.

Azure DevOps CI/CD Pipeline - PaperLive Learning (Hands-on Training Project) **2025**

- Built automated CI/CD pipelines using Azure DevOps YAML for build, test, and deployment stages.
- Implemented multi-stage deployments across Dev, Test, and Production environments with approval gates and release controls.

EDUCATION

B.Tech, Computer Science & Engineering **Jun 2024**

Visakha Institute of Engineering and Technology, Narava, Visakhapatnam, Andhra Pradesh, India

Diploma, Electrical and Electronics Engineering **Apr 2020**

Behara Technical Campus, Narava, Visakhapatnam, Andhra Pradesh, India

CERTIFICATIONS & TRAINING

- AWS Cloud Practitioner Essentials (AWS Skill Builder) - AWS (Jun 2026)
- Course Completion Certificate in DevOps, AWS, Azure, and GCP - PaperLive Learning (2025)
- Project Experience Certificate (Cloud & DevOps) - PaperLive Learning (2025)
